# Misc - @Bash

In this challenge, we were given a string as follows.

```
5A495A323032337B346D62793077625F677330663973675F677334675F2167355F345F733468733F7D
```

So, we use a online multi decoder from cachesleuth.com. We got some suspicious results here in hexadecimal.

Then, we try some decoder to decode the results. After trying some methods, we got it using AtBash chipher decoder. Thanks to dcode.fr.

So, this is the flag.

```
ARA2023{4nyb0dy_th0u9ht_th4t_!t5_4_h4sh?}
```
